Profile

Full Stack Developer with 3+ years of experience building scalable web and mobile applications for high-demand environments, including platforms used by more than 12,000 users.

Experience developing end-to-end solutions, system integrations, REST APIs, and cloud-based platforms focused on process automation, scalability, and operational optimization.

Skilled in frontend, backend, and mobile development, contributing to software architecture, secure authentication, production deployments, and modern product development.

Skills

Languages: Python, TypeScript, JavaScript, Dart

Backend: Django, Django REST Framework, FastAPI, Flask, GraphQL, REST APIs, JWT, OAuth

Frontend: React, Next.js, Redux Toolkit, Zustand, TanStack Query, Tailwind CSS, Material UI

Mobile: Flutter

Databases: PostgreSQL, SQL Server

Cloud & DevOps: AWS, Docker, Linux, Git

Architecture & Tools: Secure authentication, RESTful APIs, system integration, role-based access control (RBAC), modular frontend architecture

Languages: English (B2)

Experience

Full Stack Developer

Sep 2022 – Present

Corporación Universitaria de la Costa

- Development and maintenance of scalable web platforms used by more than 12,000 users, optimizing academic and administrative institutional processes.
- Designed and developed modules for user management, internships, scholarships, and internationalization, centralizing operational workflows and improving institutional management.
- Designed and implemented REST APIs for data integration and interoperability between institutional systems and SQL Server.
- Implemented secure authentication and access control using OAuth, MSAL, and JWT for institutional platforms.
- Developed Flutter mobile applications to automate internal processes and reduce manual operational tasks.
- Technical leadership of the internationalization module, replacing manual workflows with a centralized platform that improved operational efficiency.
- Development and maintenance of features for officially registered academic software used in institutional environments.

Full Stack Developer (Freelance)

2024 – Present

Lumet CRM

- Designed and developed a CRM platform for managing customers, products, and business operations in enterprise environments.
- End-to-end system architecture and development using Django REST Framework, PostgreSQL, React, and JavaScript.
- Implemented secure authentication with JWT and OTP verification, including multi-user management and role-based access control.
- Developed dynamic functionalities and automated PDF/Excel reporting to optimize operational workflows and reduce manual tasks.
- Deployed and configured cloud infrastructure on AWS for production environments using Linux, Docker, and scalable backend services.

Projects

QA Intelligence Platform

[View](#)

- AI-powered QA platform that audits public URLs using Playwright, axe-core, and LLMs to generate automated technical reviews.
- Implemented a full stack architecture using FastAPI, React, and Docker, including screenshot capture, accessibility analysis, console error monitoring, and performance metrics.
- Integrated Groq API with LLMs for real-time generation of structured technical reports.

Technologies: FastAPI, React, TypeScript, Playwright, Docker, Groq API, LLMs, axe-core.

SYNC — Real-Time Collaboration Board

[View](#)

- Collaborative platform inspired by Jira and Linear featuring modular frontend architecture, advanced drag-and-drop interactions, and real-time collaboration simulation.
- Implemented global state management using Zustand + Immer, decoupled persistence, and scalable feature-based architecture.
- Developed an interactive system using @dnd-kit, Framer Motion, and keyboard shortcuts for a modern and optimized user experience.

Technologies: React, TypeScript, Zustand, Immer, Framer Motion, @dnd-kit, Tailwind CSS.

ORBIT — Product Operations Intelligence

[View](#)

- Platform focused on Product Operations and Growth teams, centered on product metrics, feature adoption, experiments, and operational analytics.
- Built scalable frontend architecture using React, TypeScript, Zustand, and TanStack Query with clear separation between UI, global state, and data layers.
- Developed interactive dashboards, role-based access control, and a keyboard-first command palette focused on productivity and navigation.

Technologies: React, TypeScript, Zustand, TanStack Query, Tailwind CSS, Recharts.

Education

Systems Engineering

Universidad Simón Bolívar

2018 – 2024

Diploma in Software Engineering and IT Management

Universidad Simón Bolívar

2024
